The World of Entertainment and Social Interaction Without the World Wide Web

People always want to watch a show for entertainment. There are things to do even without the World Wide Web. People would wait for their favorite show on tv. Most kids in this time were very excited to watch their favorite cartoon show on tv during weekends and they even buy the complete episode of it then they invite their friends to watch it together. For adults, they patiently wait for the news and commonly the family watch drama for bonding moments before going to sleep. People would also go to the concert of their favorite idols. They would even buy albums or show of their favorite singer or artist in a CD even if it is pirated. In school, they like to perform a lot during events. They most likely involved themselves in competitions so that they can learn how to interact and be competitive. Example of these competitions is a dance competition, where they would meet to choreograph their step uniquely and not based it on the internet. Spoken word poetry, where people compose their own poetry then recite it in front of many people. Another is singing competition, where you can practice in front of the mirror. People can go also to a theatre where they can enjoy their time together. They can watch different act in a theatre like a stage play, film, opera and also musical. In adventures or events, people like to take pictures of everything that touches their eyes. After taking the pictures, they would print it share it to their friends. They even make stories through with it.

Playing game is also a form of entertainment, without the world wide web, people will experience having a hard time in getting their games. The web helps people to get their games through the internet, people can buy their games online and download games for their phones, computers and other gaming devices. Without the web, people will go out and buy their favorite games. Arcades will become popular for those people who can't afford to buy games since they can't download pirated games. Sports is also considered as a game. In the field of sports without World Wide Web, radio will be the common device used to broadcast popular sports such as basketball, football, hockey, boxing and other sports. Television will be there too, to show the events happening in other countries cast the hosts. Also, cameras will be useful, it can be use to capture every moment that highlights the game and it is also used to take pictures and put it in the newspapers. Newspapers will give information about the game such as the name of the player or team that won, who is the most valuable player and other information it also informs those who want to know the results of each game.

There are also outdoor activities that the people can do for entertainment if the world wide web is not a yet invented, here are some of them. First, people always know where the party is being held every Friday night, the way they always know is through a chain of information being passed around via verbal or written. Second, people are more engaged in

athletics, this is because one way of connecting with other people is by interacting with them. Third, people are going to parks to relax, play, have a picnic or just see the beauty of nature. Fourth, they meet often to talk, go on a road trip, hang out at the mall, or just have a picnic outside.Fifth, Hiking is another outdoor activity that both adult and kids with a sense of adventure like.

Reading is good for our brain, most of the people use it to reduce their stress, to gain new knowledge, expand their vocabulary, improved their concentration and of course it is entertainment for all ages, an escape from the reality. People have many means on how to get reading materials, most of the people buy it in the book stores, some borrow it in the library or simply surf it in the web or by the search engine. Today the most popular reading material for all ages are from the web, some of these are manga or comics, webtoons, E-books, and some websites like Wattpad and Bookish. Some of the most search websites that are not even for reading are being visited by a lot of people like reddit and 9GAG. They visit this website because of funny comments, bright ideas, and brilliant solutions made by random people. If you observe people nowadays, reading becomes an integral part in our daily life because of this reading materials and the web. It becomes a hobby for many and entertainment for others. Imagine a world without the web, which an easy access to different kinds of reading materials does not exist. It will be a pain for most of people mainly because there will be no means that people can use for them to share their thoughts or opinions, new ideas, and even the funniest joke that they made. Imagine the future generation without these reading materials or some websites that post inspiring stories, the future generation will not have a chance to read a famous work of a random person who can maybe inspire and motivate them with their future career or future plan.

Music is also part of entertainment, the world wide web changed the music industry any way possible. From listening to Spotify to watching on YouTube, the world wide web is used to access a variety of music with different genres for our entertainment. Getting the best in Spotify requires the user to purchase a "premium" upgrade which one way of transaction through it is online payment. Music artists also upload their music in YouTube for promotion and extra income based on online views. Music is now easy to access thanks to the world wide web. Music being easily accessible affected the music business, making the music artists difficult to earn. Illegal music downloads and music sharing prevents some listeners from buying soundtracks, albums, the music itself, and also prevents contributing to the number of online views since there's no need to access the world wide web if the music is already saved. Music can easily be accessed being said, it helped to start and independent artists reach their music out and gain listenership throughout the world without seeking backers and supporters from big company labels. The world wide web allows starting and indie artists easily discovered

by talent scouts. Some famous music artists today only started by uploading the music they create in YouTube before the music becomes a great hit. The contribution of the world wide web to the music industry has pros and cons. Without the world wide web, the majority of the artists won't be discovered and would not have contributed in the world today. Without the world wide web, music piracy will not exist. Vinyl and CDs will be more popular.

Today socials interaction between people in different places of the world is made possible with the help of technologies. One of the technologies that widely helps in social interaction of people is the world wide web or simply just the web. With the web, message, comments or feedback, can easily send to people and they can respond quickly. Online dating and social media sites are also effect of the web in social interaction, people can now meet new people by just using the websites. If people don't have this technology called the web, to interact with one another people need to meet personally. People have to travel places or invite someone to interact with them. For people in far places, they have to write mail and deliver it, which can take a month if the destination is very far. They can also make telephone calls, which is expensive and it depends on the place that you're going to call, especially in other countries. There is also a radio used for interaction in short distance. One type of this radio is the pager which can send and receive messages. Also if the web is not invented, there are still phones that can send text messages and make calls. There is also internet which can send and receive emails through Simple Mail Transfer Protocol (SMTP). If the web is not invented then a lot of people will send messages through phone texts and emails.

World wide web already became a bridge to entertainment and also in social interaction, if world wide web is not invented today, there will be changes that will happen. People can't watch or listen online, and download movies, music, or games. It will be hard to find books that they want, and they need to buy these books. People will be out playing outdoor games, or doing outdoor activities. There will be some new devices for communication or phone texts and calls will be used often.
